

What is claimed is:

- 1 1. A seat structure comprising:  
2 a seat frame;  
3 a three-dimensional net stretched over the seat frame;  
4 a skin material for selectively covering the three-dimensional net; and  
5 a fastener for connecting a portion of the skin material and the three-  
6 dimensional net, the fastener being selectively opened or closed to change a surface  
7 rigidity of the seat structure.
- 1 2. The seat structure according to claim 1, further comprising a cushioning  
2 material inserted between the three-dimensional net and the skin material to reduce a  
3 vibration transmissibility.
- 1 3. The seat structure according to claim 1, wherein the portion of the skin  
2 material is a portion with which a back of a seat occupant is brought into contact.
- 1 4. The seat structure according to claim 2, wherein the portion of the skin  
2 material is a portion with which a back of a seat occupant is brought into contact.
